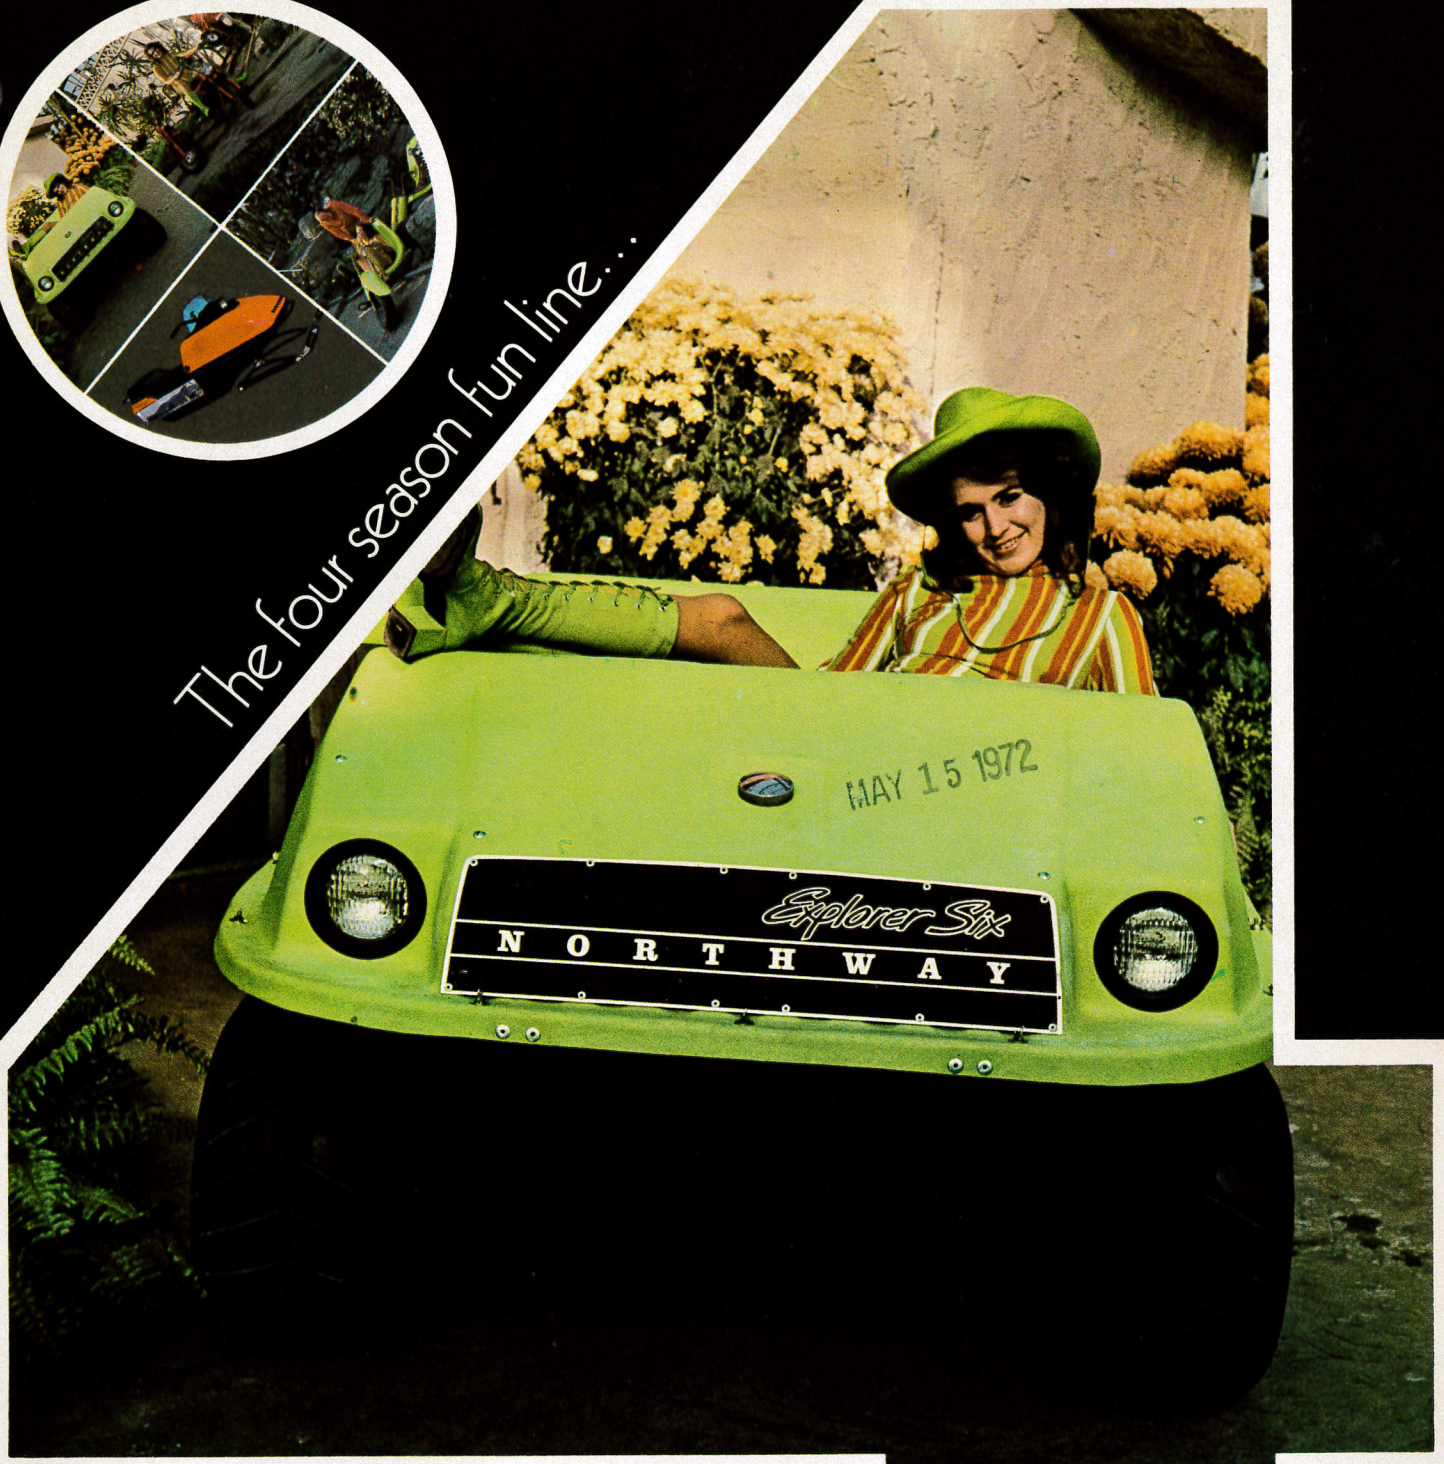
The four season fun line...



Northway Explorer 6

Whether it's winter — spring — summer or fall with your Explorer 6 you can cover them all. Through snow — stream — marsh — or simply climbing a steep hill, your Explorer 6 will take you there with ease!

Your Explorer 6 goes 4-wheel drive vehicles — 2 wheels better. There is drive power at everyone of EXPLORER's 6 wheels, and those tires are made soft and fat to dig in on any surface. WATER-WALKING. No need to turn back if there's a stream or pond between you and where you want to go. Or, if that stream or pond is where you want to go. EXPLORER 6 is amphibious; the ribbed tires, spinning, push it through the water. It's unsinkable. So, come to where the fun is — step-in — and drive yours today.

NORTHWAY

444 Explorer 6

FEATURES

Electric start. Reverse gear. Sealed beam head lights. Five inch steel channel frame. Triple — seal axle bearings. Baggage compartment. Body of tough polyethylene plastic.

BORG-WARNER TRANSMISSION

The Explorer 6 transmission by Borg-Warner (in case anyone should ask) is a planetary band type, with clutching and braking engagement accomplished by an oil immersed friction band and planetary gear. Of course, it's really two transmissions, one for each line of wheels, which puts the power where you want it — at the wheels.
